

Visual Hoop

transport & care

*Thanks for your purchase of the Visual Hoop!
To guarantee many hours of enjoyment, please
follow these steps closely.*

1. Storage & care

Always store the Visual Hoop
in the locked circular shape, either
freely hanging or laying on a flat surface.

This ensures that the tubing stays naturally in
a perfectly round shape.

To prevent tube warping or cracking, do not
leave the Visual Hoop in strong sunlight
and do not perform in sub-zero
temperatures.

2. Transport

To travel with the Visual hoop, you can tie the tube into
a partial coil for a short period of time.

First unlock the connector
and disconnect the tube.

In 2 persons, carefully bend the tube
and secure it with 4 pieces
of velcro or gaffer tape,
like in this picture.

Do not lock the connector into a fully enclosed coil.
